Door Bottom Repairs.

[Left MH0201](#) or [Right MH0202](#)

This panel repairs the bottom 50mm of the door frame and is suitable for doors rusting at the base of the skin and outer edge of the bottom of the frame.

In line with our policy of continued improvement this panel is now made professionally for the Monte Hospital to give superb quality and fit. Built using our original and accurate steel jigs which replicate the base of the inner door frame. Panels follows every contour of the tool. Detail includes the specially punched "V" shaped slots to hold the seal strip

Door Base Repair.

[Left MH0203](#) or [Right MH0204](#)

Lower 170mm of interior frame. Ideal for serious rot in lower frame. Made on the same jig as the door bottom repair but ending up higher into the base of the frame to finish just below the base of the lower door hinge. The panel is deeper in all respects as the horizontal joint is now concealed behind the door card.

This panels is also now made professionally for a superb fit and exceptional quality

Door Frame Top Rail.

[Left MH0205](#) or [Right MH0206](#)

Outer stiffening "rail" welded where it joins the top of the door skin and then glued or bonded to the outer skin just above the handle recess. The stiffener rots primarily as paint is often scratched during installation of the black trim strip by the steel clips holding it in place. With a rotted top rail the whole door will feel very flexible so it is worth checking its condition and replacing if in doubt!

Door Skins.

[Left MH0207](#) or [Right MH0208](#)

Our door skins are formed on an incredibly accurate steel jig. Jig was made when restoring an undamaged S2 and welded into the shell to ensure perfect shut and swage lines. The black alloy trim strip fits on the top as does the door handle in its steel "cradle"

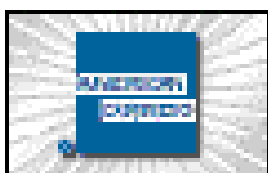

The best door skins you will get anywhere on the planet!!
